DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2,4-6,8 are rejected under 35 U.S.C. 102(b) as being anticipated by Kassies (US 5302819).

Regarding claims 1 and 2, Kassies discloses a photosensitive area (image sensor, Figure 6A 119, column 9, line 68). Kassies also discloses a microlens (118) that spans the peripheral region of the photosensitive area, and the microlens does not span a central portion of the photosensitive area and includes a hollowed-out central portion (an annular lens, column 9, lines 63-65).

Regarding claim 4, Kassies discloses that the image sensor (119) may be a CCD camera (column 9, line 68).

Regarding claims 5 and 6, Kassies discloses a camera (column 9, line 68) with a photosensitive area (image sensor, Figure 6A 119, column 9, line 68). Kassies also discloses a microlens (118) that spans the peripheral region of the photosensitive area, and the microlens does not span a central portion of the photosensitive area and includes a hollowed-out central portion (an annular lens, column 9, lines 63-65).

Art Unit: 2878

Regarding claim 8, Kassies discloses that the image sensor may be CCD (column 9, line 68).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 3 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kassies (US 5302819).

Kassies discloses an image sensor with a photosensitive area (119) and a microlens (118) that spans the peripheral region of the photosensitive area, and the microlens does not span a central portion of the photosensitive area. Kassies remains silent regarding the size of the photosensitive area. However, determining size is a matter of design choice and is of routine skill in the art. It would have been obvious to one of reasonable skill in the art at the time the invention was made to make the photosensitive area have a width of at least 10 microns because the size of the photosensitive area is chosen with respect to the desired accuracy.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian J. Livedalen whose telephone number is (571) 272-2715. The examiner can normally be reached on Mon- Fri, 8:30 am to 5:00 pm.

Art Unit: 2878

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dave Porta can be reached on (571) 272-2444. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
